Source Code Access Control

Ref: 2.5
Product: iConnect Plus
Organisation: Cache Digitech
Classification: Internal — Confidential
Version: 2.0
Date: 2026-11-03
Deployment model: On-premises (Cache Digitech premises) · VPN for remote access
Audience: Engineering management, security assessors, developers

---

1. Purpose

Document **access controls for iConnect Plus source code** hosted on GitHub while **production runtime and data** remain on Cache Digitech premises.

---

2. Repository inventory

Remote name	URL	Role
`origin`	`https://github.com/ronanop/enterprise-erp.git`	Primary — fetch and default push
`iconnectplus`	`https://github.com/Moksh-CacheDigitech/iConnectPlus.git`	Always-synced mirror (code/refs)
`iconnectplus-erp`	`https://github.com/moksh-sharma/iConnectPlus-ERP.git`	Always-synced mirror (code/refs)
`gitlab`	Internal GitLab host	Mirror on explicit request only

Mirrors sync **code and refs only** — not GitHub collaborators or team settings.

---

3. Access principles

Principle	Implementation
Least privilege	GitHub org teams per role
No secrets in repo	`.env`, keys, certs gitignored
MFA on GitHub	**Template / Pending sign-off** (org policy)
Branch protection on `main`	**Template / Pending sign-off**
Audit log review	GitHub enterprise/org audit — **Template / Pending sign-off**

---

4. Role matrix (template)

Role	Read	Write / merge	Admin	Typical members
Developer	Yes	Via PR	No	Module engineers
Module lead	Yes	Approve PRs	No	Connect + module owners
Platform admin	Yes	Yes	Limited	Platform team
External auditor	Read-only snapshot	No	No	Time-boxed — **Template / Pending sign-off**

Populate member names from HR/GitHub — **not in this pack**.

5. Separation: source vs runtime

Asset	Location	Access path
Source code	GitHub	Internet + GitHub auth
Production DB	On-prem PostgreSQL	LAN/VPN only
Production secrets	Host `.env`	SSH / secrets manager — **Template / Pending sign-off**
CI artifacts (if any)	**Template / Pending sign-off**	Restricted

Compromise of GitHub **must not** directly expose production DB without separate credential theft on premises.

6. Offboarding

Step	Owner	Status
Remove GitHub org membership	Engineering manager	**Template / Pending sign-off**
Rotate shared secrets if exposed	Platform	As needed
Revoke VPN	IT	Same day

7. Related documents

Ref	Document
