AI Transparency Notice

Ref: 6.4
Product: iConnect Plus
Organisation: Cache Digitech
Classification: Internal — Confidential
Version: 2.0
Date: 2026-11-03
Deployment model: On-premises (Cache Digitech premises) · VPN for remote access
Audience: Users of AI-assisted features in iConnect Plus

1. Purpose

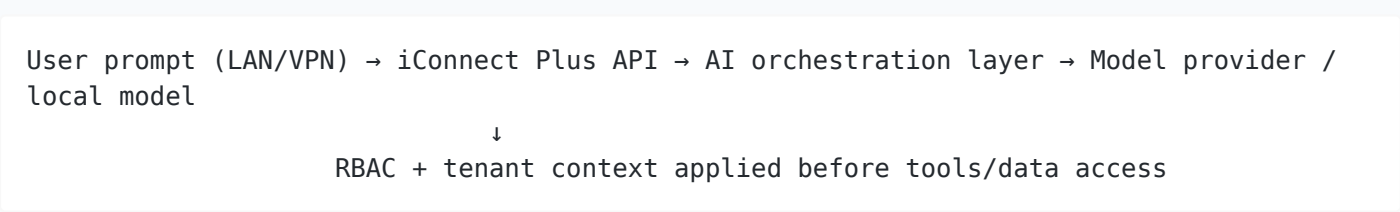

Explain how **artificial intelligence (AI)** and **automated assistance** may be used in iConnect Plus so users can make informed decisions. This notice supplements **6.3 Privacy Notice & Terms of Use**.

2. Scope of AI features

Feature area	Description	Availability
AI Assistant	Conversational help, summaries, drafting suggestions	**Template / Pending sign-off** per tenant/module
Virtual E.A.	Task-oriented executive assistant flows	**Template / Pending sign-off**
Embedded suggestions	Inline text completion or classification	**Template / Pending sign-off**

If a feature is not enabled for your tenant, this notice applies only when that feature is turned on.

3. How AI works (high level)

Aspect	Policy
Authentication	Same as core app — JWT HttpOnly cookies, RBAC
Network	Access only via **LAN or Cache Digitech VPN** to on-prem app
Data sent to models	Prompts may include text you provide and **permitted** context fields
Automated decisions	**No fully automated legal/hr/finance decisions** without human review unless explicitly configured — **Template / Pending sign-off**

4. Model & infrastructure disclosure

Item	On-premises deployment (v2.0)
Primary ERP data	Stays in on-prem PostgreSQL / MinIO
Model execution	**Template / Pending sign-off** — options: (a) on-prem model host at Cache Digitech, (b) approved external API with DPA

Training on your prompts	**Default: not used for public model training** — confirm in vendor DPA
Logging	Prompts/responses may be logged for audit — retention per **5.1** (≥180 days on-prem)

Current model vendor / endpoint: Template / Pending sign-off

5. Personal and confidential data

- Do **not** paste **restricted** data (full PAN, Aadhaar, passwords, unrestricted salary lists) into AI prompts unless policy explicitly allows.
- The system applies **data classification** (`public` / `internal` / `confidential` / `restricted`) — AI tools must respect RBAC when retrieving context (**4.1**).
- Optional redaction layer: **Template / Pending sign-off**

6. Accuracy and limitations

AI outputs may be **incorrect, incomplete, or outdated**. You must:

- Verify facts before business, legal, or HR actions
- Treat AI output as **assistive**, not authoritative
- Escalate to human experts for regulated decisions

7. Human oversight

Control	Description
User review	You are responsible for submitted content
Admin enablement	Tenant admins control feature flags
Audit	Security-relevant AI actions logged where implemented — **Template / Pending sign-off**

8. Your choices

Choice	How
Opt out of optional AI	Do not use AI menus; request admin disable — **Template / Pending sign-off**
Report harmful/incorrect output	IT / platform ticket — **Template / Pending sign-off**
Data subject requests	Via **6.3** grievance contact

9. Updates

When new AI capabilities ship, this notice will be updated and users notified — **Template / Pending sign-off**.
