iConnect Plus — Module Features (as built)

Document type: Solution Features Inventory
Product: iConnect Plus (Enterprise ERP)
Baseline: Architecture Lock v1.1 · Addendum v1.2 · ADR-001 · ADR-002
Updated: 2026-10-09
Classification: Internal — Confidential
Audience: Engineering, Product, Architecture, Delivery

This document is the **features companion** to `Enterprise_ERP_Master_Architecture.md`. It uses the same module portfolio and section shape, but lists **features implemented in code today** (API + admin web + employee ESS surfaces), not the full FRD wishlist.

Sources of truth for this inventory

Layer	Location
API mount	`apps/api/src/shared/router.py` → `/api/v1`
Module packages	`apps/api/src/modules/*`
UI registry	`apps/web/src/config/modules.ts`
Module nav / sidebars	`apps/web/src/config/*`, workspace nav components
Living catalog (short)	`docs/00_CURRENT/MODULE_CATALOG.md`

When FRD and this document disagree on *what ships today*, treat **code + this document** as current and open an ADR / FRD change if the baseline must move.

---

1. Executive Summary

iConnect Plus ships as a **modular monolith** with twenty-plus business domains plus shared platform engines. Every module below is **present in the API router** and (except ESS / public portals) has an admin web entry.

Depth today falls into three bands:

Band	Meaning	Examples
Deep product UX	Bespoke dashboards, workflows, and multi-step screens beyond generic resource lists	Finance, CRM, Procurement/SCM, Projects, Assets, HR, Marketing, Service (tickets), Email
API + list UI	Full (or broad) REST resource set with ModuleHub / workspace sidebar + `ResourceListView`	Sales, Inventory, Manufacturing, Quality, Payroll, Recruitment, Helpdesk, Analytics, Integration, Ecommerce, Portal, GRC, Documents
Thin / partial	Small intentional surface or scaffolding in progress	Voice agent, Agent read, MCP bootstrap, Landing access-gate; Service generic registry routes disabled

Shared across all modules: Microsoft Entra SSO + HttpOnly JWT cookies, RBAC permission catalogs, Workflow / Notification / Audit engines, `modules.platform` ports (outbox, numbering, finance posting, stock, approvals), dark slate-teal shell UI with hero KPI cards.

---

2. How to Read This Document

2.1 Maturity legend

Status	Meaning
Implemented	Primary flows usable in API + UI for the listed features
Partial	Core path works; adjacent FRD areas thin, list-only, or gated
Scaffold	Routers / registry keys exist; UX is mostly generic CRUD
Roadmap	Documented vision only — not shipped as a product module

2.2 Section template (per module)

Each module section mirrors the Master Architecture catalog:

Field	Content
Web	Primary admin href(s)
API	Primary `/api/v1` prefixes
Maturity	Legend above
Features	Implemented capabilities (API and/or UI)
Key flows	End-to-end paths that work today

---

3.2 Portfolio summary (as built)

Domain	Modules	Maturity (summary)
Platform	Foundation, Email, Organization, Master Data, Platform seams, Integration	Implemented (Master Data list UX scaffold-heavy)
Financial	Finance, Payroll	Finance deep; Payroll Implemented (list + API)
Commercial	CRM, Sales, Marketing, Ecommerce, Portal	CRM/Marketing deep; Sales/Ecommerce/Portal list+API
Supply	Procurement, Inventory, Manufacturing, Quality	Procurement deep; others Implemented list+API
People	HR, Recruitment, ESS	HR deep workspace; Recruitment list+API; ESS Implemented
Delivery	Projects, Assets, Service, Helpdesk, Documents	Projects/Assets deep; Service Partial UI; Helpdesk/Documents mix
Insight	Analytics, GRC, Agent/Voice/MCP	Analytics/GRC scaffold-rich; AI Partial

---

4. Platform & Foundation Modules

4.1 Foundation (Auth, RBAC, Workflow, Audit, Settings)

Web	`/foundation`
API	`/auth/*`, `/tenants`, `/users`, `/roles`, `/permissions`, `/modules`, `/workflows/*`, `/notifications/*`, `/audit/*`, `/settings`
Maturity	Implemented

Features

- Local login, MFA verify, refresh/logout, `/me` (+ avatar)
- Microsoft Entra OAuth (config, login, callback, exchange)
- Tenants, users, roles, permissions
- Module membership / admin-member assignment
- RBAC with Redis-cached permission resolution
- Workflow definitions and instances
- Notification engine API (templates/events used by Email UI)
- Audit log read
- System / tenant settings
- Admin hub screens for all of the above (generic resource lists)

Key flows: Authenticate → session cookie → authorized API; submit → workflow approve/reject; mutations audited.

4.2 Email & Notification System

Web	`/email` (+ compose, templates, deliveries, events)
API	`/notifications/*` (foundation)
Maturity	Implemented

Features

- Email overview dashboard with KPIs
- Compose UI
- Templates, deliveries, and event logs
- Microsoft Graph send path (async via Celery)
- Device token registration path for push
- Module user admin (`/email/users`)

Key flows: Event → template render → Graph delivery → status logging.

4.3 Organization

Web	`/organization`
API	`/companies` , `/branches` , `/departments` , `/business-units` , `/locations` , `/cost-centers` , `/profit-centers` , `/organization` (tree), `/auth/context`
Maturity	Implemented

Features

- Multi-company hierarchy; branches; departments; BUs; locations
- Cost centers and profit centers
- Org tree view
- Session org context (company / branch selection)
- ERP users (`/organization/users`) and module-user mapping (`/organization/module-users`)

Key flows: Provision company → branches/depts → assign users → set org context.

4.4 Master Data

Web	`/master-data`
API	`/employees` , `/customers` , `/vendors` , `/products` , `/product-categories` , `/uoms` , `/currencies` , `/taxes` , `/assets` (MD stub), `/warehouses` , `/party-registrations`
Maturity	Implemented (party registration deep; other masters list scaffold)

Features

- Employee, customer, vendor, product masters
- Product categories, UoMs, currencies, taxes, warehouses
- Customer and vendor **registration** workflows (list / new / detail / edit) with KYC/credit via `/party-registrations`
- Published read projections for other modules (`modules.master_data.published`)
- Master-data asset stub (distinct from operational Asset Management)

Key flows: Party registration → approved master; other modules read masters via published ports (no cross-module ORM writes).

4.5 Platform seams (ops API)

Web	(consumed by all modules; home KPIs/charts)
API	`/platform/slo/*`, `/platform/metrics`, `/platform/ops/status`
Maturity	Implemented

Features

- Ports / adapters: finance posting, inventory stock, workflow, notify, audit, outbox, numbering, integration
- Outbox drain/purge Celery tasks
- Numbering SSOT; approval matrix + `workflow_gate`
- Optimistic lock (`VersionMixin` → HTTP 409)
- Field encryption helpers; idempotency records; system job runs
- Read-model projections (finance / inventory / payroll facts)
- SLO budgets/alerts/status and ops status surface
- Architecture CI gates (cross-module ORM, permission catalog, tenant scope)

Key flows: Service action → number → optional workflow → outbox → Celery drain → adapters/projections.

4.6 Integration Hub

Web	`/integration`
API	`/integration/*`
Maturity	Implemented

Features

- External systems, connectors, API credentials, OAuth clients
- Webhooks, event definitions / subscriptions
- Message queues, messages, retry queues, dead letters
- Data mappings / transformations
- Sync jobs and sync logs
- API usage, rate limits, monitors, reports
- Workspace sidebar: Overview, Systems, Connectors, Webhooks, Events, Queues, Sync Jobs, Dead Letters

Key flows: Connect → map → sync; webhook ingest → retry / DLQ.

---

5. Financial Modules

5.1 Finance & Accounting

Web	`/finance/**` (custom UX + reports)
API	`/finance/*`
Maturity	Implemented

Features

- Account groups & chart of accounts (list + create/detail)
- Fiscal years and periods
- Journals (create, submit, approve, reject, post, reverse)
- General ledger inquiry and account drill-down
- AR and AP workspaces (customer/vendor invoice detail routes)
- Tax register, currency rates, asset transactions
- Reports hub: Trial Balance, Balance Sheet, P&L, Cash Flow, Cash Flow Forecast, Treasury Suggestions, GL report, Journal Register, AR/AP Aging, Tax Summary, Cost Center Summary
- Posting via platform finance ports; SoD / finance-scope hooks
- Module dashboard with hero KPIs

Key flows: Draft journal → approve → post → GL; subledger activity → statements; period close support.

5.2 Payroll

Web	`/payroll` (+ `/hr/payroll` shell entry)
API	`/payroll/*`
Maturity	Implemented

Features

- Payroll periods and policies
- Salary structures, components, structure lines
- Employee salaries and component overrides
- Earning / deduction types; tax configurations; statutory contributions
- Payroll runs, run lines, payslips
- Bonuses, reimbursements, loans / installments, adjustments
- Payroll postings and summaries; reports
- Finance posting path for payroll journals
- Sidebar: Periods, Salaries, Runs, Payslips, Bonuses, Loans, Summaries

Key flows: Attendance/leave inputs → run → approve → payslip → GL posting.

---

6. Commercial Modules

6.1 CRM

Web	`/crm` (custom sales workspace)
API	`/crm/*`
Maturity	Implemented

Features

- **Sales CRM core:** Companies (account workspace), leads, opportunities, quotes, OVF, contacts, products
- My Jobs approval inbox; OEM quotes; customer POs; sales performance; stock & aging (shared with Procurement)
- Meetings, customer follow-ups, KYC / account mapping
- OEM, distributors, BOQ, SOW, entities, end customers

- Saved report builder (`/crm/reports`)
- Classic CRM registry: lead sources/assignments/activities, pipelines, stages, campaigns, interactions, tasks, follow-ups, call/email/visit logs, CSAT/feedback
- Blueprints / actions on leads, opportunities, quotes, OVF
- GST registrations and customer expense (FOC) ledger paths on companies
- Attachments, members, lookups, approval step owners, KYC records

Key flows: Company → Lead → Opportunity → Quote → OVF → Won/Lost / SCM share; My Jobs approve/reject.

6.2 Sales

Web	`/sales`
API	`/sales/*`
Maturity	Implemented

Features

- Price lists, discount rules, customer credit
- Quotations, sales orders, deliveries, invoices, returns
- Module dashboard + workspace sidebar for primary O2C screens

Key flows: Quotation → Order → Delivery → Invoice → AR; returns / credit notes; credit holds.

6.3 Marketing & Social Media

Web	`/marketing` (custom workspace)
API	`/marketing/*`
Maturity	Implemented (workspace) · Partial vs full FRD depth

Features

- Campaigns (list + detail), operations board, my-work, inbox, tasks, workload
- Content library, content requests, calendar, brand voices
- Research, trends, competitors, marketing analytics
- Social accounts, M365 channel integration
- Platforms, pillars, publish jobs, approvals, AI/Celery generation pipeline (`/marketing/ai`)
- Team members and ops surfaces

Key flows: Campaign → content request → generate → score → calendar → publish/approve.

6.4 Ecommerce

Web	`/ecommerce`
API	`/ecommerce/*`
Maturity	Implemented

Features

- Stores, sales channels, product listings (prices / inventory)
- Customer carts and cart items
- Orders / order items, payments / payment transactions
- Shipments and shipping tracking
- Return requests / return items
- Coupons, promotions, marketplace connectors
- Notifications and reports
- Sidebar: Stores, Listings, Carts, Orders, Payments, Shipments, Returns

Key flows: Channel order → pay → fulfill → inventory/sales sync; returns.

6.5 Customer / Supplier Portal

Web	`/portal`
API	`/portal/*`
Maturity	Implemented

Features

- Portal accounts, customer profiles, sessions
- Portal dashboards / widgets, notifications, message threads
- Order and invoice views; document access; download history
- Support tickets and service requests
- Saved reports / searches, preferences, devices, login audits
- Sidebar: Accounts, Profiles, Sessions, Orders, Invoices, Tickets, Service Requests

Key flows: Portal login → view commercial docs → raise ticket / service request.

---

7. Supply & Operations Modules

7.1 Procurement & SCM

Web	`/procurement` (custom SCM workspace)
API	`/procurement/*` (+ public order/project tracking)
Maturity	Implemented (advanced FRD-15 planning Partial)

Features

- Classic P2P: requisitions, RFQs, vendor quotations, comparisons, POs, GRNs, vendor invoices, returns, contracts, vendor performance
- **SCM workspace:** queue, OVF detail/timeline/preview/hold/charges, PO create/finalize, vendor POs, fulfill-from-stock, item plan, negotiations, ETD, commercial attachments
- Delivery challan, delivery status, delivery projects/sites
- Installation and service contracts / service plans & visits
- Inventory ownership & aging; assign-owner; open-for-sale
- Sheet trackers; correspondence / mails; approvals; reports; analytics
- Public: order tracking (PO + email), project tracking by token

- Module dashboard + deep OVF/PO/GRN routes

Key flows: OVF → SCM queue → PO → GRN → challan / delivery project; classic P2P with workflow gates.

7.2 Inventory & Warehouse

Web	`/inventory`
API	`/inventory/*`
Maturity	Implemented

Features

- Stock balances (on-hand / reserved / available)
- Bins, batches, serials, reservations
- Transfers, adjustments, cycle counts
- Policies (reorder / safety stock)
- Valuation layers
- Stock summary / batch expiry reports
- Platform stock adapter used by GRN / issue / reservation paths

Key flows: GRN putaway → reserve → issue/transfer → count/adjust → valuation.

7.3 Manufacturing

Web	`/manufacturing`
API	`/manufacturing/*`
Maturity	Implemented

Features

- BOMs, routings, work centers, machines
- Production orders
- Material issues / returns, production receipts
- Scrap, WIP, variances, reports
- Sidebar: BOMs, Production Orders, Issues/Receipts, WIP, Scrap, Machines

Key flows: Plan → WO → issue → execute → FG receipt → WIP/variance close.

7.4 Quality Management

Web	`/quality`
API	`/quality/*`
Maturity	Implemented

Features

- Inspection plans, sampling plans, characteristics, defect types

- Incoming / in-process / final inspections
- Defects, NCRs, CAPAs
- Supplier quality, complaints, audits, scores, reports
- Sidebar: IQC / IPQC / FQC, NCRs, CAPAs, Audits, Complaints

Key flows: Plan → inspect → release/hold; NCR → CAPA.

---

8. People Modules

8.1 HRMS

Web	`/hr` (custom HR workspace)
API	`/hr/*` (+ `/public/onboarding/*`)
Maturity	Implemented

Features

- **Workforce:** employee list/detail/new; designations, grades, job levels, employment, management groups, department/designation assignments
- **Time:** shifts, roster, holiday calendars, attendance, corrections, weekly-off policies, attendance rules, biometric devices, OT allotments, on-duty / comp-off, shift rotations/swaps
- **Leave:** leave types, balances, requests, adjustments (management page + setup)
- **Talent / learning:** performance reviews, goals, KPIs, OKRs, appraisals, training (+ rooms, attendance, requests)
- **ESS bridge:** ESS inbox, ESS policies, org docs; `/hr/ess` shell
- **Lifecycle:** separation, offboarding, digital onboarding (admin + public token portal)
- **IT Admin:** stocks, travel, requisition, meeting rooms, employee assets/documents
- Reports, roster, setup, superadmin, module users
- Registry CRUD mirrors for HR resource keys

Key flows: Hire-to-retire; leave/attendance approval; digital onboarding portal → HR case; ESS handoff.

8.2 Recruitment

Web	`/recruitment` (+ `/hr/recruitment` entry)
API	`/recruitment/*`
Maturity	Implemented

Features

- Job requisitions and postings
- Sources, recruiters, candidates, resumes, candidate documents/notes
- Applications and application stages
- Interviews and interview feedback
- Offers and offer approvals
- Background verification, reference checks, talent pools
- Onboarding cases and onboarding tasks
- Reports

- Sidebar: Requisitions, Postings, Candidates, Applications, Interviews, Offers, Onboarding

Key flows: Requisition → apply → interview → offer → BGV → onboard → HR employee.

8.3 Employee Self-Service (ESS)

Web	Employee app / ESS surfaces (`/hr/ess*` ; `apps/employee-app`)
API	`/ess/*`
Maturity	Implemented (API + employee-app)

Features

- Profile (bank, KYC, emergency, education), change password, face security hooks
- Leave types/balances/requests and corrections
- Attendance punch + policy; WFH / on-duty / comp-off
- Manager team approvals (leave, comp-off, on-duty, corrections, WFH)
- Payslips, documents, holidays, announcements, notifications
- Assets (+ tickets), training, performance, separation
- Meeting rooms, support tickets, policies
- Device tokens for push

Key flows: Employee self-serve leave/attendance → manager approve → HR/payroll consume.

---

9. Delivery & Support Modules

9.1 Project Management

Web	`/projects` (custom delivery workspace)
API	`/projects/*`
Maturity	Implemented

Features

- Projects CRUD + detail workspace (assign, configuration, stage workflows)
- Phases, milestones, tasks (dependencies/assignments), timesheets / entries
- Resource plans / allocations; budgets, costs, profitability
- Issues, risks, change requests, documents, comments, status history, notifications
- **Site installation delivery:** survey → SCM → onsite/material handover → installation → acceptance
- My Jobs / completed jobs, follow-ups, stage alerts, PO queue, customer trackers
- Member vs manager dashboards with hero KPI grids
- Reports

Key flows: Approve project → plan → site workflow stages → timesheet cost → acceptance / close.

9.2 Asset Management

Web	`/assets` (+ Non-IT domain)
API	`/assets/*`
Maturity	Implemented

Features

- **IT:** categories/types, asset register (new/detail/edit), components
- Incoming assets, QC, registration queue
- Assignments (+ return), DC challans, transfers, maintenances
- Locations / site locations / buildings; warranties; insurance
- Maintenance plans, service histories, checklists, meter readings
- Depreciation, disposals, revaluations, audits, documents, notifications, reports
- Inventory import; information portal / self-service asset views
- QR / barcode support
- **Non-IT:** dashboard, inventory, types, locations, asset detail, assign/unassign, maintain, dispose, import
- Domain memberships

Key flows: Incoming → register → assign → maintain → depreciate → dispose; Non-IT parallel register.

9.3 Service Management

Web	`/service` (SOP ticket UX)
API	`/service/*`
Maturity	Partial (ticket UX deep; generic registry UI disabled)

Features

- Service request tickets (list / new / detail / edit)
- Mailbox (inbound email), field-engineer workspace, resolved tickets
- Service SLAs
- Full API also exposes: categories, requests, tickets, assignments, schedules, work orders, tasks, checklists, visits, materials, time entries, expenses, escalations, feedback, resolutions, documents, notifications, contracts, reports
- Admin web intentionally **does not** expose generic `/service/{resource}` lists (`ALLOWED_SERVICE_RESOURCES` empty)

Key flows: Inbound/request → ticket → assign → resolve → SLA/feedback.

9.4 Helpdesk

Web	`/helpdesk`
API	`/helpdesk/*`
Maturity	Implemented

Features

- Ticket categories, priorities, tickets, assignments
- Status history, comments, attachments, activities

- SLAs, escalations
- Knowledge bases / articles, resolutions
- Support teams, shifts, schedules
- Customer feedback, notifications, reports, dashboards
- Sidebar: Tickets, Assignments, Escalations, Knowledge, Resolutions, Teams, Feedback

Key flows: Report → assign → resolve → CSAT; SLA breach → escalate.

9.5 Document Management (DMS)

Web	`/documents` (+ PDF editor)
API	`/documents/*`
Maturity	Partial / scaffold-rich (storage/OCR hardening ongoing)

Features

- Folders, documents, versions, metadata
- Tags, permissions, shares, comments
- Approvals, workflows, checkouts, audits, attachments
- Templates / template fields
- Retention policies, archives
- Notifications, reports
- **PDF editor** (`/documents/pdf-editor`) for fill/sign
- Object storage via MinIO/S3; ClamAV on upload
- Sidebar: Folders, Documents, Versions, Approvals, Templates, Retention, Archives

Key flows: Upload → review → approve → publish; retain → archive.

---

10. Governance & Insight Modules

10.1 GRC (Governance, Risk, Compliance)

Web	`/grc` (+ `/grc/compliance` hub)
API	`/grc/*`
Maturity	Scaffold / broad CRUD (+ dashboard)

Features

- Overview / compliance monitor
- Policies, versions, acknowledgements
- Controls and control tests
- Risk categories, registers, assessments, treatments
- Compliance frameworks, requirements, assessments
- Audit plans, audits, findings
- Corrective actions, exceptions, incidents
- Notifications, reports
- Sidebar: Policies, Risks, Controls, Compliance, Audits, CAPA, Incidents

Key flows: Risk identify → assess → treat → control test; audit → finding → CAPA; policy lifecycle.

10.2 Analytics (BI)

Web	`/analytics`
API	`/analytics/*`
Maturity	Implemented

Features

- Dashboards and dashboard widgets
- Reports, schedules, executions
- Datasets, dataset sources, fact tables, snapshots, refreshes
- Metrics, KPIs, dimensions
- Alert rules and alert notifications
- Subscriptions, data exports / imports
- Query history, usage audits
- Sidebar: Dashboards, Reports, KPIs, Datasets, Metrics, Alerts, Exports
- Platform home consumes module KPI feeds for executive view

Key flows: Dataset → metric/KPI → dashboard/report → schedule/alert.

10.3 Platform AI surfaces (Agent / Voice / MCP)

Web	`/voice-agent`
API	`/voice-agent/*`, `/leads|/orders|/invoices` + `/agent/*` (agent_read), `/mcp` (separate mount)
Maturity	Partial / in progress

Features

- Voice assistant UI (ElevenLabs conversational)
- Signed WebSocket URL API for voice agent
- Read-only agent endpoints for leads, orders, invoices, customers, products
- MCP streamable HTTP server mounted at `/mcp` (tools from OpenAPI config)
- Full LLM gateway, permission-aware RAG, Virtual E.A. — **roadmap** (§12)

Key flows: Open voice agent → signed URL session; agent tools read curated APIs via MCP/agent_read.

10.4 Landing / access gate

Web	Marketing / landing surfaces
API	`/public/access-gate/*`
Maturity	Scaffold-thin

Features: Access-code verify + gated session for public marketing site.

---

11. Cross-Domain Flows (as built)

11.1 Procure-to-pay

```
Requisition → (workflow) → RFQ / Vendor quote → PO → GRN
       → stock via IInventoryStock → AP invoice → Finance payment
```

OVF-driven path: **CRM OVF** → **Procurement SCM queue** → **PO** → **GRN** → **Delivery challan**.

11.2 Order-to-cash

```
CRM lead / opportunity → Quote → OVF / Sales order → Delivery → Invoice
       → AR / journal posting via IFinancePosting
```

11.3 Inventory movement

```
Reservation / transfer / adjustment / GRN / issue
       → InventoryStockAdapter → stock ledger
       → optional outbox domain.inventory.* → analytics facts
```

11.4 Hire-to-retire

```
Recruitment → Master employee → HR employment / leave / attendance
       → ESS self-service → Separation → F&F via payroll → Finance
```

11.5 Asset lifecycle

```
Incoming / Register → Assignment / Transfer → Maintenance → Disposal / Revaluation
DC challan ↔ SCM (see docs/09_OPS/dc-challan-scm-contract.md)
```

11.6 Project site delivery

```
Project / site → Survey → SCM → Onsite / Material handover
       → Installation → Acceptance → Tracker / My Jobs
```

11.7 Platform side effects

```
Service action
  ├─ number via SSOT numbering
  ├─ start workflow if APPROVAL_POLICIES mode=workflow
  ├─ enqueue outbox (notify / audit / finance / integration / domain)
  └─ Celery drain → adapters → projections
```

---

12. Roadmap — Not Yet Product Features

These remain product vision for full GA (also §12 in the Master Architecture). Thin API/UI already exists for agent/voice/MCP (§10.3).

Extension	Target (not shipped as full module)
AI Assistant & AI Infra	LLM gateway, permission-aware RAG, in-module copilots, guardrails
Virtual E.A.	Executive assistant across modules

Extension	Target (not shipped as full module)
Licensing & Activation	Entitlement service disabling unlicensed APIs/UI/jobs
Backup & DR	Productized backup jobs, restore runbooks UI

OpenSearch, Kubernetes/EKS extraction, and warehouse extract remain **evolution-gated** (`modules/platform/evolution.py`).

---

13. Document Hierarchy

Document	Role
`Enterprise_ERP_Master_Architecture.md`	Solution architecture, deploy topology, principles
This document	Per-module **as-built features** inventory
`docs/00_CURRENT/SYSTEM_OVERVIEW.md`	Stack, platform seams, request/async paths
`docs/00_CURRENT/MODULE_CATALOG.md`	Short API/UI mount map + primary flows
`docs/02_FRD/*`	Baseline functional requirements (intent)
`docs/05_ARCHITECTURE_LOCK/*`	Locked decisions

Maintenance: When a module gains a material feature (new bespoke workflow screen or API domain), update the matching section here and the short row in `MODULE_CATALOG.md` in the same change set when practical.
